Web Lockers

Please remind students that over the summer everything in their web lockers will be deleted except for what's in the home directory. If they wish to keep documents they will need to move them into their home directory. Web lockers are available for grades 3-12.

June 2010

Deep Freeze

Over the summer we are going to be finishing up with our project to install deep freeze on all computers. Most computers are done, but if yours does not have deep freeze on it now, it will be installed by the time you come back after summer vacation. This means that everything you have saved on your computer will be moved into your network folder. If your computer ever crashes you will now be able to access your files from any computer. To access your network folder: double click on My Computer and then double click on the mapped drive that contains your name, OR double click on the mapped drive that contains the word staff and then double click on the folder with your name.

Have a Great Summer!

Computers

Please do not disconnect your computers for the summer. We will most likely be visiting each computer this summer so it will be easier for us if you leave them intact.

Also, please do not move computers from classrooms over the summer and please do not help yourself to stray computers.

Thanks for your help!
